

How to: Glasses Case mod

I thought this would be a good little mod for someone who wears sunglasses or glasses just for driving ect. (I wear glasses all the time so not much use to me).

Note that this hasnt actually been done on a 1 series, but the pictures below are from an Astra – concept should be the same....

Here is what it looks like in the Astra.

Pull handle down and then pull cover down untill it looks like this.

Remove both screws and remove handle. These are the holes the screws screw into

Now the distance inbetween the centres of both hole on the glasses case is shorter than on the BMW handle, (not buy a great deal) so you will need to drill an extra hole to achieve the correct pitch between the holes.

You will have to do a bit of measuring to find out were the hole needs to go, but to give you an idea it needs to be roughly here.

I don't know what size hole you will need but just drill a small hole and open up untill the screw will screw in.

On the glasses case there is a lug this should be removed. Also i'm not sure what affect that step will have. You should be able to get the case in different colours too. Some on ebay http://cgi.ebay.co.uk/VAUXHALL-SUNGLASSES-HOLDER-GLASSES-CASE-CORSA-ASTRA-/150488691575?pt=UK_CarsParts_Vehicles_CarParts_SM&hash=item2309d33377

ope this is enough info for someone to easily fill in the gaps and complete this mod. This is just food for thought.
