## ZFX™ Flash Cure Accelerator Additive

Three years in the making, **Zaino ZFX™** is finally here!

**ZFX™**, with **Flash Cure™** (patent pending), is a revolutionary new polish enhancement additive that's exclusive to the Zaino Show Car Polish system. There's never been anything quite like **ZFX™**, and here's why:

- All polish, sealant and wax protection systems must "cure" before they can effectively protect your paint. Once cured, all paint protection systems begin to deteriorate. The rate of deterioration depends on many factors, including the chemicals used, bonding qualities, weather, washing, and use of the car.
- A very few specialty paint protection systems can be layered to increase protection and paint appearance. Layer-able systems must cure prior to application of subsequent coats. Depending on the product, cure time may take a few hours or a few days.
- For lasting protection, most synthetic sealants are formulated to be hard. If not properly designed, synthetic sealants may crack, yellow or distort the optics of the paint surface.

**ZFX™** is a Zaino Show Car Polish acceleration and appearance additive. It offers near-instant cure time, reduced surface distortion, enhanced polish flexibility, and improved bonding to both paint and additional layers of Show Car Polish. In simple terms, **ZFX™** vastly improves paint surface appearance and increases polish durability.

**ZFX™** is the product of more than 30 years experience painting show cars. Professional painters add chemicals and compounds to their paint mix prior to painting to improve paint flexibility, reduce paint imperfections, increase hardness, and improve gloss. We applied this

same line of thinking in the development of **ZFX™**. The result is a stunning professional show car finish with less effort, no waiting and longer-lasting results.

**ZFX™** can be used with any of our Show Car Polish products, including Z-2, Z-3 and Z-5. Plus, **ZFX™** makes using Z-1 Polish Lok unnecessary on cars that have been clayed and thoroughly cleaned with Dawn dishwashing liquid.

When we say "acceleration," we mean it! Adding **ZFX™** to any one of our Show Car Polishes prior to use is like kicking an F-14 Tomcat into afterburner. The competition just can't compete... we'll shoot them down every time. Perfect shine, less time -- guaranteed!

### **Z-1 SHOW CAR POLISH LOK PRE-CLEANER AND GLOSS CONDITIONER**

For optimum results Z-1 Polish Lok™ must be used before applying Show Car Polishes Z-2, Z-3 or Z-5. A unique non-abrasive formulation for regular and clear-coated paint finishes. Z-1 Polish Lok™ is not your typical pre-cleaner, like everyone else sells, but a very special base-coat foundation for all our Show Car Polishes. It gently cleans, conditions and prepares the paint finish for Show Car Polish. Z-1 Polish Lok™ creates an optically perfect, flat molecular bond between paint and polish to increase light refraction and reflectivity.

Z-1 Polish Lok™ will dramatically heighten the "wet-looking", mirror gloss and lock in the gloss protection shield. Apply a thin coat of Z-1 Polish Lok™ using a 100% cotton cloth or applicator pad, in a circular motion, to the entire vehicle, no rubbing is necessary, DO NOT WIPE OFF. Follow directions on Show Car Polish, and apply directly over hazed Z-1 Polish Lok™. Z-1 Polish Lok™ is recommended twice a year on everyday vehicles and once a year on show cars. One eight ounce bottle of Z-1 Polish Lok™ will do approximately eight mid-size cars.

### **Z-2 SHOW CAR POLISH FOR CLEAR COATED FINISHES**

Our customers describe Z-2 Show Car Polish with one word. AWESOME! Latest synthetic technology gives Z-2 Show Car Polish the "wettest-looking," deepest, slickest, clearest, richest, distortion-free and longest-lasting finish protection in the industry. These products were originally created for some of the finest custom showcars in the world to enhance and protect their already flawless paintwork. Imagine what it will do for your paint. Z-2 Show Car Polish contains state-of-the-art optical enhancers and gloss additives to show the true color and clarity of your paint. It is 99.9% optically perfect. We also added Ultra-Gard™ UV(40) our advanced technological sunscreen for the ultimate protection against fading and shrinking. A special additive to keep the paint from losing its elasticity and resilience. This restores the gloss on rubber and plastic painted parts, which have a tendency to fade and lose gloss faster than the rest of the vehicle.

Z-2 bonds with the paint pigment and will get "wetter," "deeper and richer" with multiple coats, it will also help eliminate swirl marks. Z-2 is a hydrophobic-based formula and contains no abrasives, silicones, or yellowing carnauba wax. Z-2 is the easiest and quickest polish you will ever use, it will not streak, yellow, smear, film or leave a haze even on black, in any situation. Leaves no powder or white residue in cracks, is non-greasy, non-oily, anti-static, will not attract dust or dirt and can be

applied to the entire vehicle in the sun or shade. Z-2 polish is a true paint protectant designed to replace traditional waxes. It will give your paint finish total environmental protection and is the only protectant you will ever need. It will offer more protection than any wax in the industry.... You will see!!! Nothing sticks to Zaino Show Car polish. It will outperform, outprotect, outshine and outlast anything on the market today. Guaranteed!

The first application of Z-2 Show Car Polish will produce a super high wet-looking, durable gloss. This is fine for the average vehicle. For the enthusiast, a second coat of Z-2 will simply amaze you in terms of wetness, slickness and optical clarity. You will really see the effect, Z-2 polish has on making ordinary paint finishes look Show Car quality. The third coat, well, simply put it's AWESOME! One eight ounce bottle of Z-2 Show Car Polish will yield approximately eight to ten coats on a mid-size car.

### **Z-3 SHOW CAR POLISH FOR REGULAR PAINT**

Same synthetic technology as Z-2 Show Car Polish above, but also includes a custom blend of emulsifiers to gently clean, condition and maintain regular paints, which tend to oxidize, shrink and lose their resiliency quicker. Special filling agents for fine scratches, buffing and swirl marks. Optical enhancing additives designed specifically for single stage urethanes, lacquers, enamels, lucite, imron, acrylics and older paint formulations. One eight ounce bottle of Z-3 Show Car Polish will yield approximately eight to ten coats on a mid-size car.

### **Z-5 POLISH FOR SWIRL MARKS & FINE SCRATCHES**

FACT. The only way to remove, heavy swirl marks and scratches from a clear coated surface is to have the car professionally machine buffed with an abrasive compound. This should be the last resort, as factory clear coat is very thin and you can break thru it very easily. Also, most polishes and waxes contain abrasives, they remove some swirl marks but create new swirls. Kinda of catch-22. Z-5 is the first non-abrasive polish that will eliminate swirl marks, fine scratches and spidering, without hurting the integrity of the clear coat. It does this in stages, anywhere between 1 to 3 applications. This in itself is a major technological breakthrough. With each application of Z-5 polish, you will see the swirl marks and fine scratches gradually lessen, until the marks are no longer visible. Although this procedure may seem time consuming, the results are well worth it. This is the only way a swirl mark problem should be addressed and corrected.

Z-5 is the safest, most cost effective way of repairing the paint, so to speak. After you are satisfied with the way the paint looks. Switch to Z-2 Show Car Polish to achieve an even higher wet-looking, optically perfect paint finish. Follow up with Z-6 "Gloss Enhancer" spray. Z-6 "Gloss Enhancer" spray should be used between every coat of Z-5 or Z-2. It is an extremely high, optical enhancing product and dramatically increases light refraction and reflection. The results will knock your socks off! All Show Car Polish products are molecular crosslinking and are 100% compatible with each other.

NOTE: For any future swirls or scratches you may get, just reapply Z-5 to the affected area or the whole car if you prefer. Z-5 can be used right over Z-2. They are completely compatible and interchangeable. For the highest optical paint enhancement always follow up Z-5 with a coat of

Z-2. One eight ounce bottle of Z-5 Polish will yield approximately eight to ten coats on a mid-size car.

### **Z-6 ULTRA CLEAN "GLOSS ENHANCER" SPRAY**

Z-6 "Gloss Enhancer" spray is a very important addition to the Show Car Polish line-up. This product dramatically boosts and intensifies all Show Car Polishes. Z-6 contains seven optical clarifiers and our unique wet gloss enhancers to increase the "wet-looking", mile-deep Show Car Polish shine. We highly recommend it for fast cleaning of dust, water spots and light soil from painted surfaces, without scratching. Forms a tough molecular bond with Show Car Polish to increase the depth of gloss, optical clarity, slickness, durability and reinforce the UV(40) protection. Super anti-static formula reduces dust and dirt pickup by up to 60%. Z-6 will not streak, smear, haze, dull or leave a film. A must for quick touch-ups and the show winning edge. Concentrated 16 oz. spray. Less than one ounce does an average car.

### **Z-7 SHOW CAR WASH**

A concentrated blend of special cleaners, UV blockers and Show Car Polish that actually condition and enhance the gloss of painted vehicles. PH Balanced it does not contain detergent, alkalines or acids. Special water-based lubricant, prevents dirt from scratching the paint finish when washing. Unique foaming agents produce longer-lasting, dirt encapsulating suds. Rinses completely, leaving a non-spotting, non-filming, streak-free, just polished look. Z-7 Show Car Wash was designed to deep clean, increase the paint gloss and reinforce the Zaino Show Car Polish system with every washing.

### **Z-9 'LEATHER SOFT' SPRAY CLEANER**

An alkaline-free, special blend of emulsifiers, mink oil and synthetic lanolin to safely clean all fine leather surfaces. It removes soil and stains without harming the natural oils in leather. Will not cause leather to crack, shrink or dry out. Z-9 will restore leather surfaces to like new condition. Perfect for all leather products. Excellent for vinyl too. After cleaning, Z-10 Leather in a Bottle™ Treatment and Conditioner is recommended to keep the leather supple, soft, protected and enhance the leather scent.

### **Z-10 "LEATHER IN A BOTTLE" TREATMENT AND CONDITIONER**

Two years in the making and already rated number one in the industry. Z-10 Leather in a Bottle™ Treatment and Conditioner contains a perfectly balanced, solvent-free blend of special oils and other natural nutritives, which penetrates, softens and preserves the leather. We also added Ultra-Gard™ our total UV protector (40) and our exclusive real leather oil concentrate. This feeds and enhances the leather scent, to give your vehicle that great new leather smell. Just wipe on and let dry, no buffing is necessary. It leaves a non-oily, non-greasy, non-sticky, stain repelling, natural luster and restores the warm supple, soft feel, and smell of fine leather. Does a great job on vinyl interiors and dashboards too. One whiff and you will agree its Leather in a Bottle™. This product has no equal in the world.

### **Z-12 CLEAR-VIEW GLASS POLISH**

Finally, a glass cleaner and polish that really works. We have yet to find

a stain that it did not remove. Formulated with modified cleaners and mild abrasives, that deep cleans and polishes all glass surfaces. Removes acid rain, water spots, road film, stubborn stains, annoying interior glass film and fine to medium scratches. This product will remove plasticizing (the hazy film that attaches to the inside of the windshield on all late model vehicles) in one application. Leaves glass crystal clear and sparkling. You will think the glass disappeared. Will not scratch or distort glass. Great for restoring old windshields. Can also be used to clean chrome and metal surfaces. For hand or machine use. Not for use on Coated Glass, painted or plastic surfaces.

#### **Z-14 PLASTIC-MAGIC CLEANER & POLISH**

Z-14 is designed to clean and protect all types of plastic surfaces without scratching. It can be used on clear or colored plastics from very thin films to very thick acrylics, lexan, abs, plexiglass, etc. Z-14 deep cleans as it polishes and restores dull plastic to like new condition. It penetrates and seals, tiny scratches and pores in plastic to increase surface clarity and reduce distortion. Z-14 is fast drying and leaves no sticky, oily or greasy residue. It creates an ultra-slick, anti-static, smudge free surface. Great for restoring old plastic lenses and other hard plastic parts. Not for use on vinyl, textured or porous surfaces.

#### **Z-16 PERFECT TIRE GLOSS**

For many years I have been dissatisfied with the tire dressings on the market. They are loaded with silicone oil. They are very greasy, oily and messy. They attract dirt and dust like a magnet, have no UV protection, can cause tire deterioration, give an unrealistic gloss and wash off as soon as the tire gets wet. The tire dressing, always slings and gets onto the wheels and surrounding paint surface and causes discoloration and staining. I have yet to find one benefit to using this type of product. Z-16 Perfect Tire Gloss is a non-oily, non-greasy, rubber protectant and finishing treatment. Its unique formula with Ultra-Gard™ UV(40) and antistatic properties prevent drying, cracking, browning and repels dust and dirt. Z-16 leaves an incredibly durable, water repellent, perfect looking satin finish, that's only slightly glossy and dry to the touch. Use on all exterior rubber, tires, moldings, plastic trim, weatherstripping, underhood hoses and more. Just wet a sponge with Z-16 and apply to the surface to be treated and let dry. It will last thru rain and multiple washings. Z-16 is very durable and will last an average of 3 to 4 weeks on an outdoor car. Z-16 is not recommended for interior seats or vinyl tops.

#### **Z-18 ClayBar**

Z-18 ClayBar removes imbedded contamination from the paint finish that cannot be removed using conventional cleaning methods. Z-18 is non-abrasive and works like no cleaner, compound or chemical can and is safe for use on all paint finishes. The following contaminants are a general description of some of the contaminants that Z-18 ClayBar removes. \*Rail dust- is actually tiny, sharp bare metal shavings that can adhere and imbed in the paint finish and cause serious damage when left untreated. Over 70% of new vehicles are transported from the factory using the rail system, therefore rail dust is present on new vehicles. There are many instances where a vehicle travels or is parked near a railroad in which case the finish is infected with rail dust. \*Brake dust- similar to rail dust, brake dust is also in the form of tiny, sharp bare metal shavings. In recent years, asbestos brake pads were replaced with

metallic brake pads, which are actually brake pads made from tiny metal or metallic shavings. Anytime a vehicle is braking; brake dust is disbursed into the air and onto the paint finish. Since the brake dust is now actually tiny particles of bare metal, this form of brake dust can seriously damage the paint finish when left untreated. \* Industrial fallout- is the general term used for pollution and can be found in many forms. Eventually, pollution settles onto the paint finish of all vehicles and can cause serious damage when left untreated. \*Tree sap, Road tar, Bug residue, Paint overspray, acid rain deposits and other contaminants that adhere and imbed into the paint finish can cause damage when left untreated. Contaminants that are left on the paint surface can weaken the protective properties and even cause serious damage to the paint finish after a short time. Z-18 ClayBar is optional, but highly recommended as the ultimate way to truly clean the paint finish and prepare the surface for Zaino polish.

### **#314 CUSTOM 4x5 POLISH APPLICATOR**

A specially designed 100% virgin cotton polish applicator. #314 is approximately 4x 5 inches square, with special reversed stitching to prevent scratching of paint surfaces. The 100% virgin cotton material features the finest texture and softest nap available. The cotton surface surrounds a special silicone free, sponge insert. Slightly dampen applicator with some Z-6 spray or a light mist of water, before applying polish to applicator. This technique will make Show Car Polish spread further and more evenly. After use, hand wash applicator using Liquid All or Tide and let air dry.
